

LASH EXTENSION CARE GUIDE

What you need to know to make them last.

Lash after care is key to better retention and healthy natural lashes

- Do not get lashes wet (shower, sweat etc.) for at least 2 hours after your appointment.
- Do not use oil based products around the eye area. Oil will break down the adhesive.
- Keep them clean. Use an oil free cleanser with a (clean) small, soft bristle brush daily. This will prevent infections and keep natural oils at bay.
- Avoid extreme heat around your extensions. Examples: stoves, hair tools, open flames etc.
- Brush daily with a mascara wand.
- Never use waterproof mascara, waterproof eyeliner or a mechanical lash curler.
- It is best to sleep on your back or with a 3D eye mask. Satin pillow cases also help.
- Do not pull, pick or rub your lashes.
- Do not perm or tint your lashes.
- If you require lash removal, please see your lash professional.
- Book a fill appointment every 2-4 weeks to keep them looking full. It is normal to lose up to 7 lashes per day. Fills every 3 weeks are ideal for most people.
